

Astro's Oil Nitrogen-Creatinine Scrub

Dosage for cats:

1/4tsp 2x/day

the dose can be increased to 1/2tsp 2x/day after 2 weeks for pets whose BUN and creatinine levels are very high.

Dosage for dogs:

up to 15.5lbs or 7kg

1/4tsp 2x/day

the dose can be doubled (1/2tsp 2x/day) after 2 weeks for pets whose BUN and creatinine levels are very high and for those who haven't responded positively to the regular dose after 1 month.

Dogs between 16lbs/7.3kg and 35lbs/16kg

1/2tsp 2x/day

the dose can be doubled (1tsp 2x/day) after 2 weeks for pets whose BUN and creatinine levels are very high and for those who haven't responded positively to the regular dose after 1 month.

Dogs between 36lbs/16.3kg and 70lbs/32kg

1 tsp 2x/day

the dose can be doubled (2tsp 2x/day) after 2 weeks for pets whose BUN and creatinine levels are very high and who haven't responded to positively to the regular dose.

Dogs 71lbs/32kgs and up

2tsp 2x/day

the dose can be increased to 3tsp 2x/day after 2 weeks for pets whose BUN and creatinine levels are very high and who haven't responded to positively to the regular dose.

For the purpose of introducing the product into the pet's system, a dose can be mixed into canned/wet food or mixed with a little warm water (approximately 2-3ml per every 1/4tsp) and pipetted directly into the mouth.

A probiotic is not absolutely necessary but can increase the efficacy of the Nitrogen-Creatinine Scrub, if you choose to use Kiefer or probiotic yogurt as the probiotic source, you can mix the Nitrogen-Creatinine Scrub directly into 1 tbs of either and feed to pet as a treat. If you choose to add a probiotic in the form of a capsule (Astro's Oil Probiotic capsules will soon be available), only 1cap/day is required to be administered at the same time with the Scrub.
